Park Meadows Cosmetic Surgery Celebrates Breast Cancer Awareness Month and 100th DIEP Flap Breast Reconstruction Patient

In the fight against breast cancer, Park Meadows Cosmetic Surgery finds its niche in helping women affected by this disease regain their sense of femininity and wholeness by offering the most advanced breast reconstruction techniques available. This October, Park Meadows Cosmetic Surgery is celebrating Breast Cancer Awareness Month to promote breast cancer knowledge, research, prevention, and treatment. This fall also marks an exciting milestone in Park Meadows Cosmetic Surgery's advances in Deep Inferior Epigastric Perforator (DIEP) Flap surgery, an innovative and muscle-sparing approach to autologous breast reconstruction following mastectomy or lumpectomy.

Park Meadows Cosmetic Surgery is the first in the Rocky Mountain area to offer bilateral DIEP Flap surgery. With the help of the excellent staff and facility at Skyridge Medical Center, Dr. Christopher Williams and Dr. Jeremy Williams have been performing DIEP Flap surgery on breast reconstruction patients since 2009. Last month, Park Meadows Cosmetic Surgery completed successful DIEP Flap reconstruction surgery on its 100th DIEP Flap patient.

Unlike expander and implant based breast reconstruction, which rely on artificial breast implants to rebuild the breast following life-saving cancer treatments, autologous tissue reconstruction uses tissues from a patient's own body to reconstruct the breast. The donor tissue is a flap of muscle, skin, and fat taken from one area of the body and relocated to the chest wall, all without losing its own blood supply. With the DIEP Flap surgery, the tissue is taken from the patient's abdomen during a procedure very similar to a tummy tuck. Unlike other methods of breast reconstruction that use tissue flaps, the patient's musculature is preserved with the DIEP Flap method, making it the preferred choice of breast reconstruction at Park Meadows Cosmetic Surgery.

For the more than 2.5 million breast cancer survivors living in the United States, DIEP Flap surgery can provide natural-looking results to those interested in breast reconstruction following mastectomy without the risk of muscle weakness at the donor site. With only approximately 60 to 70 surgeons in the country trained in performing this complicated procedure, Drs. Chris Williams and Jeremy Williams are recognized as pioneers in microsurgical breast reconstruction techniques in the state of Colorado.

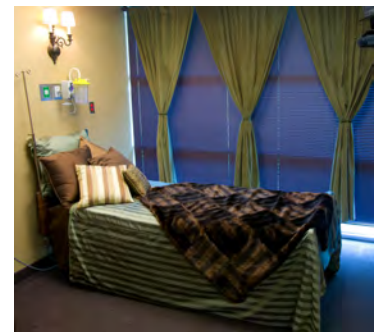

Located in the scenic heart of Colorado, Park Meadows Cosmetic Surgery is dedicated to providing patients with the highest standard of care. Its comfortable, confidential, and convenient surgery center, Park Meadows Outpatient Surgery, is accredited by The Joint Commission and dedicated to performing cosmetic surgical procedures in Colorado. In addition to offering advanced breast reconstruction techniques and procedures, Park Meadows Cosmetic Surgery's founding partner, Dr. Randolph C. Robinson (Board Certified in Cosmetic and Oral & Maxillofacial Surgery), Dr. Jeremy Williams (Board Certified in Plastic Surgery), and Dr. Christopher Williams (Board Certified in Plastic Surgery) offer a wide variety of body contouring, breast enhancement, and facial cosmetic surgeries.
