recognized as one of
America's Top Dentists
(see story on page 12)

PARK MEADOWS COSMETIC SURGERY

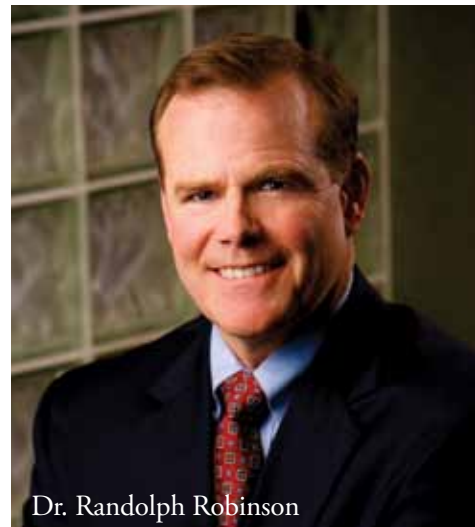

When Millard Fuller, founder of Habitat for Humanity died on February 3rd, the world lost a titan in the realm of giving. In Colorado, a similar figure has emerged over the past several years. His name is Dr. Randolph C. Robinson, founder of Park Meadows Cosmetic Surgery and co-founder of Face the Challenge, a non-profit humanitarian organization.

In April, Dr. Robinson, along with his wife and Face the Challenge co-founder Ginger Robinson will lead their 23rd international surgical team as they return to Vietnam for the 19th time. Over the past 15 years the organization has completed over 1000 surgeries for the neediest of children and adults in developing countries.

Their passion to help has brought them from Bolivia to China and they have received invitations from representatives of

several countries, such as North Korea, Guatemala, Cuba, and Bosnia. Their task is to determine which trips best meet their criteria of treating the youngest, most indigent and most deformed. Here in Colorado, Robinson has provided free facial surgeries for people with deformities from Mexico, Malaysia, the Navajo Nation, Kenya, the Philippines, and the Kyrgyz Republic.

Home-base for Dr. Robinson is here in Lone Tree where he founded Park Meadows Cosmetic Surgery. Robinson is joined by Dr. Jeremy Williams and Dr. Christopher Williams. As an international recognized facility and practice, Park Meadows Cosmetic Surgery is consists of a space which includes a luxurious reception area, several consultation rooms, an exam room and kitchen. Park Meadows Outpatient Surgery hosts two fully-equipped operating rooms and two procedure

rooms. The pre-operative room, the recovery room, and the overnight private patient suite are designed to be private and comfortable. It is the first state licensed, Joint Commission accredited surgical center in Colorado that is dedicated to providing cosmetic surgical procedures.

But as impressive as the facility is, it's difficult not to focus on the incredible level of expertise Dr. Robinson has assembled. Robinson himself is double board-certified by the American Board of Oral and Maxillofacial Surgery and the American Board of Cosmetic Surgery and is an Advanced Cardiovascular Life Support Provider. He has several publications and awards related to his specialty. He holds two patents and has achieved FDA approval on two bone lengthening devices.

Dr. Jeremy Williams is a Board-Certified plastic and reconstructive surgeon and is a member of the American Society of Plastic Surgeons. Dr. Williams is a Colorado native who has returned home after completing extensive training in plastic surgery at the prestigious Johns Hopkins Hospital (Ranked by US NEWS AND WORLD REPORT as Americas #1 hospital for over 13 years). In addition to maintaining an active interest in various areas of reconstructive surgery, (breast, traumatic facial injuries, hand, microsurgery, and cancer reconstruction) he has specific surgical interest in aesthetic facial surgery as well as cosmetic surgery of the breast and body. He has published articles and authored book chapters on plastic surgery of the face and body. He has presented his work at numerous national and international scientific conferences.

Like Dr. Jeremy Williams, Dr. Christopher Williams also attended the prestigious Plastic and Reconstructive Surgery Residency program at The Johns Hopkins Hospital. For eight years he studied the full range of Plastic and Reconstructive

surgery including craniofacial surgery, facial trauma, microsurgical reconstruction, and aesthetic surgery.

Following his residency, Dr. Christopher Williams chose to pursue specialized training with two of the world's experts in Peripheral Nerve Surgery and Microsurgical Breast Reconstruction. He is a pioneer in the field of Tissue Engineering dedicating two years of his training to the research and the development of novel technologies for cartilage and bone repair which utilizes bone marrow derived stem cells.

Together Doctors Robinson, Williams, and Williams make Park Meadows Cosmetic Surgery the facility that many people from across the region turn to for cosmetic and reconstructive procedures. The reconstructive procedures include; advanced

breast reconstruction (see DIEP Flap below) for cancer patients, cleft lip and palate, ear reconstruction, TMJ, and distraction osteogenesis.

Cosmetic procedures run the gambit and include; body contouring, breast augmentation, facelifts, rhinoplasty, tummy tucks and more. Park Meadows Cosmetic Surgery has become Colorado's pre-eminent choice for cosmetic procedures for women of all ages. They are widely recognized for their caring approach and for the convenience of combining a state-of-the-art facility and overnight suite. This combination creates the ideal setting and circumstances to assure complete comfort and confidentiality.

In conjunction with Sky Ridge Medical Center, Park Meadows Cosmetic Surgery has formed the Rocky Mountain Center for Breast Surgery. With both Dr. Christopher Williams and Dr. Jeremy Williams's level expertise in DIEP Flap, this center is one of the few in the world that can offer simultaneous bilateral DIEP Flap procedures.

What is DIEP Flap?

For cancer patients that have, or will, undergo mastectomies, DIEP Flap is the most advanced breast reconstruction surgery available today. This superior method of breast reconstruction allows the surgeon to use the patient's own body tissue without the need for implants or sacrifice of muscles in the abdomen. Having two plastic surgeons within one practice performing this state-of-the-art procedure is unique to the Rocky Mountain region, and allows for optimal care and support.

A slim incision along the bikini line is made much like that used for a tummy tuck. The necessary skin, soft tissue, and tiny feeding blood vessels are removed. These tiny blood vessels are matched to supplying vessels at the mastectomy site and reattached under a microscope.

Unlike conventional TRAM flap reconstructions, use of the refined perforator flap techniques allow for collection of this tissue without sacrifice of underlying abdominal muscles. This tissue is then surgically transformed into a new breast mound. The abdomen is the most common donor site, since excess fat and skin are usually found in this area. In addition to reconstructing the breast the contour of the abdomen is often improved much like a tummy tuck. So yes, it's very much like getting a two-for-one operation! This method of reconstruction lasts a lifetime and gives the patient very natural looking breasts.

For addition information about DIEP Flap surgery or any of the other cosmetic or reconstructive procedures contact:
